

Diesel Injector Cleaner

This Injector Cleaner is a “One-Tank Cleanup” unique maximum strength product for cleaning both external and internal diesel fuel injector deposits. Rapidly and safely dissolve carbon, gums, varnishes and other combustion by-product deposits from fuel injectors and the combustion chamber. The cleaner dissolves away Internal Diesel Injector Deposits (IDID) that plug internal passages on today’s High Pressure Common Rail (HPCR) fuel systems.

No tool is required to clean your injectors with this revolutionary product. Simply add the appropriate amount to the engine’s fuel supply. Within minutes poor injector spray patterns are restored and engine “clatter” is gone.

Features & Benefits

- Removes carbon from injector tips
- Dissolves metal contaminants through direct reaction
- Eliminates biodiesel oxidation accumulation (salt layers)
- Restores jet penetration
- Reinstates spray symmetry
- Increases power and torque
